## IYGB GCE

## Core Mathematics C1 <br> Advanced Subsidiary

Practice Paper V
Difficulty Rating: 3.8000/1.8182

## Time: 2 hours

## Calculators may NOT be used in this examination.

## Information for Candidates

This practice paper follows the Edexcel Syllabus.
The standard booklet "Mathematical Formulae and Statistical Tables" may be used. Full marks may be obtained for answers to ALL questions.
The marks for the parts of questions are shown in round brackets, e.g. (2). There are 9 questions in this question paper.
The total mark for this paper is 75 .

## Advice to Candidates

You must ensure that your answers to parts of questions are clearly labelled.
You must show sufficient working to make your methods clear to the Examiner.
Answers without working may not gain full credit.
The examiner may refuse to mark any parts of questions if deemed not to be legible.

## Question 1

The straight line $l_{1}$ has equation

$$
3 x-2 y+6=0,
$$

and crosses the $y$ axis at the point $B$.
a) Find the gradient of $l_{1}$.

The straight line $l_{2}$ intersects $l_{1}$ at the point $A(2,6)$ and crosses the $x$ axis at the point $D$.
b) Given that $\measuredangle B A D=90^{\circ}$, find an equation of $l_{2}$.

The point $C$ is such so that $A B C D$ is a rectangle, as shown in the figure above.
c) Calculate the area of the rectangle $A B C D$.

## Question 2

The gradient function at every point on a curve $C$ is given by

$$
\frac{d y}{d x}=(k x-3) \sqrt{x},
$$

where $k$ is a non zero constant.

The point $P(4,40)$ lies on $C$ and the gradient at $P$ is 34 .

Determine an equation of $C$.

## Question 3

a) Simplify fully each of the following expressions, writing the final answer as a single simplified surd.
i. $(2+\sqrt{3})(2 \sqrt{3}-3)$.
ii. $\frac{\sqrt{6}+3 \sqrt{2}}{\sqrt{6}+\sqrt{2}}$.
b) Solve the equation

$$
\begin{equation*}
8 w^{\frac{1}{2}}-w^{-1}=0, \quad w \neq 0 . \tag{4}
\end{equation*}
$$

## Created by T. Madas

## Question 4

$$
f(x) \equiv 5 x^{2}-30 x+50, x \in \mathbb{R} .
$$

a) Express $f(x)$ in the form $a(x+b)^{2}+c$, where $a, b$ and $c$ are constants.
b) Hence write down the minimum value of $f(x)$.

The point $A$ has coordinates $(5,6)$.

The variable point $B$ has coordinates $(x, 2 x+1)$.
c) Show clearly that

$$
\begin{equation*}
|A B|^{2}=5 x^{2}-30 x+50 . \tag{3}
\end{equation*}
$$

d) Use part (b) to determine the shortest distance between $A$ and $B$.
e) Hence write down the coordinates of $B$ when the distance between $A$ and $B$ is shortest.

## Question 5

A sequence $y_{1}, y_{2}, y_{3}, y_{4}, y_{5}, y_{6} \ldots$ is given by

$$
y_{n+2}=y_{n+1}+2 y_{n}, \quad y_{1}=1, \quad y_{2}=5 .
$$

a) Find the value of $y_{3}, y_{4}, y_{5}$ and $y_{6}$.
b) Find a simplified expression for the $n^{\text {th }}$ term of the sequence, by considering the first few powers of 2 .

## Created by T. Madas

## Question 6

$$
f(x) \equiv \sqrt{8 x^{3}-15}, x \geq \frac{\sqrt[3]{15}}{8} .
$$

a) Describe the geometric transformation which maps the graph of $f(x)$ onto the graph of $\sqrt{x^{3}-15}$.

The graph of $g(x)$ is a translation of $f(x)$ by the vector $\left[\begin{array}{c}1 \\ 15\end{array}\right]$.
b) Evaluate $g(3)$.

## Question 7

$$
x^{2}-4 a x+2 b+1=0
$$

The above quadratic equation, where $a$ and $b$ are constants, has no real solutions.

Show clearly that

$$
\begin{equation*}
b>\frac{1}{2}(2 a+1)(2 a-1) . \tag{4}
\end{equation*}
$$

## Created by T. Madas

## Question 8

The figure above shows the curve $C$ with equation

$$
y=\frac{2 x^{4}-x+6}{6 x}, x \neq 0 .
$$

The straight line $L_{1}$ has equation $4 y=15 x$.

The straight lines $L_{2}$ and $L_{3}$ are tangents to $C$.

Given that $L_{1}, L_{2}$ and $L_{3}$ are parallel to one another, determine an equation of $L_{2}$ and an equation of $L_{3}$.

## Question 9

The first four terms of an arithmetic series are

$$
2,(2 b+3 c),(b-3 c+1) \text { and }(4 b+5 c),
$$

respectively, where $b$ and $c$ are a constants.
Show that the sum of the first thirty terms of the series is 1365 .
